

HX series in pursuit of high-speed machining.

C551HXA FULL AUTOMATIC DOUBLE ENDS CRIMPING UNIT

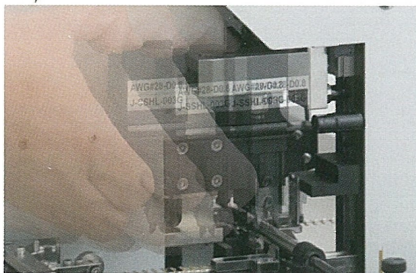

- Astonishing processing speed has been brought to realization.
- Electricity consumption and air consumption are significantly cut down. It contributes to conserve the electricity.
- Under 27mm length terminal can be applied.
- 5.7inch color touch display is taken on.

DOUBLE ENDS CRIMPING

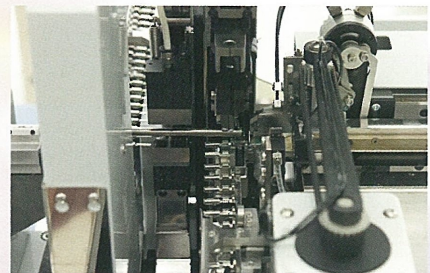

Simple & Compact, Unprecedented Capability and Surprising Processing Power Next generation full automatic crimper "CASTUGNON C551HXA" made a breakthrough in the technology of wire processor. With unique concept and imagination, C551HXA offers many user-friendly functions with its improved capability, easy operationality and simple applicator exchange (setup change). A good news for business owners as well through ultimate downsizing and miniaturization of applicators, C551HXA occupies as little space as possible.

Simplified replacement of the Applicator.

5.7inch color touch-display.

Realized High-speed Work.

Compact and light, and furthermore one touch replacement!

Newly developed applicator with a built-in ID tag automatically loads the processing condition such as terminal model number, wire size, stripping length, crimping force and management information into the HX applicator itself. So, replacement of terminal and applicator can be finished in about 15 seconds.

You just have to enter the lead length and number of pieces and then press the start button. The new applicator is so small and light that two or three pieces can be easily put on the palm.

You do not have to worry about the storage space anymore.
